

1 HOW TO STORE YOUR BARRELS ?

Store your drums with their original packaging (plastic film/cardboard).

Store your barrels in a cool (=16°C) slightly damp place to avoid any drying out.

2 COMMISSIONING RECOMMENDATIONS

Transportation and prolonged storage can dehydrate the wood. Wood is a living material and is sensitive to heat, dry air and drafts.

It's recommended to put your Orion barrel in water beforehand to ensure their quality.

Protocol before filling the barrels :

- For 20L of cold non-chlorinated water.
- Fit the bung and shake the barrel so as to wet the entire interior volume.
- Stand the barrel upright for 12 hours on each base.
- Check that there are no leaks then remove the plug.
- Drain the barrel plug at the bottom
- Fill within 24 hours, otherwise wick the barrel.

▶ **If any leaks appear and persist beyond 24 hours, don't hesitate to contact your sales agent.**
